

H₂grO Greywater for Gardens

The H₂grO Electric Greywater Diverter – Timer Switch

The electric greywater diverter features a timer switch conveniently located within the bathroom or laundry. Electric remote operation eliminates the need to go outside to open the H₂grO cover, to manually turn the valve handle.

The electric greywater diverter puts the homeowner in charge of when to water, as the greywater will only divert to garden if the timer switch is pressed. This has two benefits — only the best quality greywater is used and the plants are not over watered. For example, if the shower is being cleaned, simply by doing nothing the greywater that is heavily dosed with cleaning agents, will automatically go to the sewer. If the home owner knows the garden is dry, then they can push the timer switch before having a normal shower and give the garden a beneficial drink.

There is no need to worry about anyone unfamiliar with H₂grO misusing the system, as simply by doing nothing they are assured of doing nothing wrong.
